

Your specialist for transporting steel

Customised one-stop solutions

We make sure – across not just Germany but the whole of Europe – that your freight gets to its destination safely and reliably. For this purpose, we offer your steel company a complete transport chain as well as wagon/container solutions matched to your requirements.

WHAT WE OFFER YOU

Door to door: We provide you with multimodal transport and logistics concepts. This means that you do not require rail access. We can also provide you with additional logistical services, such as first and last mile, transshipment and storage.

Multimodal transport solutions to suit your needs: Whether you require one wagon a year or several trains a day, we can provide you with customised wagon and container solutions.

Strong fleet: We have 31,000 wagons especially for the metals and coal industry. Our wide-ranging vehicle fleet enables us to expertly transport not just coils, but also sections, pipes, castings or even extra-wide metal plates. Also, in cooperation with Innofreight, we offer innovative wagons, containers and unloading systems especially for the steel industry.

Europe-wide presence: We employ a comprehensive network of single wagons as well as national and international sidings. For this purpose, we cooperate closely with our Europe-wide subsidiaries and strategic partners.

Close to the customer: Our employees have industry-specific knowledge and, of course, the necessary intercultural and linguistic skills to ideally plan and implement your transport needs.

Your contact:
